

Industry Visit by Biomedical Science Students from City University Malaysia

We welcomed City University Malaysia for the first time to our USFDA approved Novugen Pharma manufacturing facility in Bandar Enstek, Negeri Sembilan on the 1st of August 2023. The half-day industry visit was attended by a dynamic group of 22 Biomedical Science students accompanied by 5 lectures with shared passion for science and enthusiasm to gain current industry knowledge.

The visitation was engaging as the students had the opportunity to get an up-close view of the pharmaceutical industry and gain practical insights into our vertically integrated operations focusing on manufacturing, Quality Control and R&D. During the visit, talk was given by our experienced professionals, followed by educational walk-throughs to our state-of-the-art production facility and Quality Control lab.

Our goal is to inspire young innovative minds and empower the next generation of scientists by enhancing their theoretical understanding by seeing the practical application. We are truly pleased to host the energetic group of diverse local and

international students for this visit. A special thanks to Dr. Husnul Hanani Binti Soib, Head of Department of Biomedical Science, Faculty of Allied Health Sciences for contributing to the success of the visitation. We look forward to more collaborations in the future.
