

# Journey Highlights

Dr. Sabrina Lee

## A Passion to Provide Healthcare Solutions Globally

“The thought of being able to make an impact on patients’ lives, fuelled my passion to strive in the healthcare landscape,” said Dr. Sabrina. Driven and focused to achieve this meaningful cause, Dr. Sabrina completed her PHD in Medical Neurosciences from The Center for Stroke Research Berlin (CSB), a Research and Treatment Center at the Charité –

Universitätsmedizin Berlin, Germany. Since then, her professional journey flourished for over 13 years with diverse experiences ranging from scientific research, research-based business solution to project management and business development in the pharmaceutical industry.

*“Adaptability, perseverance and a growth mindset are keys to my achievements. Additionally, the empowerment and trust given to me to manage key business projects amplify my drive to accomplish the overall organizational strategy and to reach a bigger purpose.”*

**Dr. Sabrina Lee**

Associate, Manager,  
Business Development

A turning point for Dr. Sabrina was upon joining Oncogen Pharma, which has further broadened her portfolio to international market and given her the opportunity to assume different roles as the company adapts to rapid expansion. However, for a fast-paced, lean, and ambitious company like Oncogen Pharma, it is inevitable for time to be a challenging factor. “I always take pride and joy in my work. The time constraint is not a halt for me to further hone my skills in time, project and people management to work more efficiently in the future” she added.

*“I believe that my high adaptability to changes and perseverance to get things done have helped me to overcome many challenges. Apart from my individual effort, strong teamwork is also imperative in assuring continuous success especially in a global start-up company like Oncogen Pharma”*

Recently, she has led a project which brought the company successful partnerships with reputable organizations from Europe and Asia to bring in key, niche and first to launch generic molecules to Malaysia. In July 2021, she also led a partnership project through the winning of a global tender for a turnkey project with a large academic and research-based Thai pharmaceutical company, which involves technology transfer and supply of key oncology medicines in Thailand. Some

other commendable achievements are finalizing and rolling out branding & product packaging artwork processes and creating SOP that are aligned with the corporate strategy and in coordination with various cross-functional teams.

The opportunities to stretch her skills from technical aspects to the business fronts are the main source of her motivation. “I would sincerely like to highlight the contribution of my superior, Mr. Waqas Atiq, for the guidance and opportunities which in turn help in strengthening my work engagement and the much-needed motivation during my journey with this organization” she added. As the company is entering the commercialization phase, Dr. Sabrina is looking forward not only to witness the formation of a global B2B entity but also to be one of the key persons to bring the business to new heights.
