

Leveraging Generative AI at Work | 4 & 5 December 2025

Shaping the future of work

At Novugen, we believe the future of work is shaped by people who are confident, curious, and continuously learning.

Guided by this belief, we recently brought together 27 subject matter experts and business leaders for a pilot workshop on leveraging generative AI, laying a strong foundation for practical AI fluency across the organization.

Through hands-on experience with tools such as ChatGPT, Perplexity, Gamma, and NotebookLM, applied to real business scenarios, our leaders gained valuable insights into utilizing generative AI responsibly to enhance productivity, creativity, and decision-making.

This initiative reflects our commitment to future-proofing our workforce and strengthening enterprise digital capabilities. Guided by strong ethical foundations, we are thoughtfully embedding AI learning into our leadership and capability roadmap - enabling scalable AI adoption aligned with business growth and governance, while equipping our people to lead with confidence in a digitally enabled future.
