

## Novugen Engages Future Leaders at Politeknik Nilai

On 16th of October 2024, Novugen hosted an engaging career talk at Politeknik Nilai for Semester 5 Mechanical Engineering students. Around 100 eager participants attended, keen to explore opportunities in pharmaceutical manufacturing. The session featured insightful presentations by our HR team, highlighting Novugen's commitment to developing future industry leaders.

Partnering with Politeknik Nilai has been a strategic move for Novugen. Beyond its esteemed reputation, the institute's proximity to our manufacturing facilities in Bandar Enstek fosters a closer connection with emerging professionals. This partnership has already borne fruit, with two recruits from the institute joining our Technical Trainee Program in August. Additionally, a visit from four lecturers to our USFDA-approved manufacturing facility in September has opened the door for future collaborations.

During the talk, we introduced students to our Internship and Technical Trainee Programs, emphasizing the valuable skills and experiences they can gain. We also discussed industry expectations, detailing what employers seek and the in-demand skills necessary for a successful career in the production sector.

The brief visit sparked interest from the students during the 60-minute session. Their positive feedback reinforces our confidence in the potential for ongoing collaborations with Politeknik Nilai. At Novugen, we are dedicated to empowering students and nurturing relationships that will cultivate a skilled workforce for Malaysia's evolving pharmaceutical industry.
